SYNTHETIC DEMONSTRATION - Study D

Original test fixture. Fictional participants and results. Not research evidence.

Study design: randomized, sham-controlled synthetic trial.

Mean age: treatment 35.9 years; control 35.6 years.

Country / setting: fictional research center.

Protocol D: stimulation at 20 Hz in the treatment group.

Treatment group: 13 participants completed; control: 12 completed.

Treatment group had 0 adverse events at week 3.

Control group had 2 adverse events at week 3.

Neither an absent match nor a zero result represents missing information.

SYNTHETIC DEMONSTRATION - Study D

Original test fixture. Fictional participants and results. Not research evidence.

Follow-up timing: week 5, two weeks after treatment.

Treatment group at week 3: score 32.6 points; at week 5: 34.2 points.

Control group at week 3: score 36.0 points; at week 5: 36.1 points.

Flow diagram: treatment 12 completed; control 13 completed.

The participant counts conflict with the text on physical PDF page 1.

An approved discrepancy narrative should retain both supporting passages.

No statement about injury phase is provided in this fictional paper.
